- 12 Powered PL Channels
- 10 Routable HD Monitors
- Fully Stocked Client Lounge / Producer Workspace

More than a Music Mix

STRAIGHT FORWARD WORKFLOW

When managing large input counts or multiple stages a simplified workflow is essential. Vibration's design and integration lets the engineer quickly adapt to the technical environment in order to move onto critical creative matters earlier.

NOT YOUR TYPICAL AUDIO TRUCK

In addition to state-of-the-art audio support, Vibration features a fully stocked producer lounge and workspace that doubles as a QC area. A complete off the shelf 7.1 home theatre system and two HD displays allow you to see and hear program material as you would at home, "off air" via digital satellite. Need to do a few quick overdubs after the show? No problem - This area quickly turns into a fully functional tracking space with headphone monitoring.

LIVE PRODUCTION AND BEYOND

For live to air productions in either stereo or surround, Vibration includes an array of Dolby encoding and decoding tools. After the show Vibration can quickly be turned into an onsite or offsite post-production facility allowing you to tweak before final delivery or for extended full blown audio post.

Physical Info: Deployed
 Length: 53'
 Width: 16'
 Height: 13'4"
